Bare-Metal Restore		

→ Which Backup Solution Should I Use?

Each Off-Site Backup Solution is geared towards different users and niches. The rsync Backup Solution is great for those looking to backup or restore a limited number of files every so often. Its ease-of-use allows for an on-the-go style of backup and restore. The R1Soft Backup Solution is great for those looking to backup or restore dedicated servers and small server racks. The Point-In-Time Snapshots and Multiple Restore Points allow for nearly continuous data protection and a reliable system to access restore points when you need them.
